

**Veena Srinivasan** is a Fellow at the Ashoka Trust for Research in Ecology and the Environment (ATREE), Bangalore, where she leads the Land, Water and Livelihoods Programme. Veena's research interests include inter-sectoral water allocation, impacts of multiple stressors on water resources, ground and surface water linkages, and sustainable water management policy and practice. Veena's recent research has focused on understanding anthropogenic and climatic influences in urbanizing watersheds and identifying appropriate policies and adaptation measures. As co-PI of the "Adapting to Climate Change in Urbanizing Watersheds (ACCUWa)", she has focused on measuring and modelling ground and surface water resources in the Arkavathy and Noyyal Basins and more recently in Bangalore's lakes. Veena received her PhD from Stanford University's Emmet Interdisciplinary Program in Environment and Resources (E-IPER). Her dissertation compared centralized and decentralized approaches to urban water supply in Chennai using hydro-economic modelling. As a post-doctoral scholar at Stanford, Veena was instrumental in developing a framework for a Global Freshwater Initiative at Stanford to understand patterns in the nature and causes of global water crises. Prior to joining Stanford, Veena worked for several years on energy and water issues in India, California and globally in the private and non-profit sectors. Veena holds a Masters in Energy and Environmental Studies from Boston University and a B-Tech in Engineering Physics from the Indian Institute of Technology, Mumbai.
