

# 2-Day Training Programme on GRIHA For EXISTING BUILDINGS & SVAGRIHA

## Mission

GRIHA Council is mandated to promote development of green buildings and habitats in India through GRIHA rating.

## Goals of GRIHA

Inspire, enable and engage with society, to achieve sustainable habitat for all through different variants of GRIHA rating.

## What is GRIHA EB

GRIHA for Existing buildings (EB) rating is an integrated tool to assess the performance of existing buildings and provide sustainable solutions whilst augmenting the indoor comfort of the occupants. The rated building will enjoy enhanced energy and water performance and increased thermal and visual comfort; ultimately resulting in decreased operational and maintenance costs. GRIHA for Existing Buildings rating is designed with underlining objectives, such as attaining environmental impact reduction, simplicity in execution, alignment with local and national goals, and cost-effectiveness.

## What is SVAGRIHA

SVAGRIHA (Simple Versatile Affordable Green Rating for Integrated Habitat Assessment) is a significantly simplified, faster, easier and more affordable rating system and it functions as a design-cum-rating tool. It was required that attention be paid to smaller buildings in India which although have small individual environmental footprints but their cumulative effect is far bigger.

SVAGRIHA can help in design and evaluation of individual residences, small offices, schools, motels, commercial buildings etc. Though for smaller projects, it covers all aspects like energy, water and waste, landscape, materials, etc.

## BENGALURU
